

What is Viewpoint?

Last Modified on 03/02/2022 10:30 am EST

Viewpoint is a popular ERP in the construction industry.

An Enterprise Resource Planning system, or ERP, is the system of record that most construction companies use to manage job costing and overall company financials (general ledger, invoicing, accounts payable, etc.).

Viewpoint was recently purchased by Trimble. Viewpoint is a full suite ERP that includes payroll, job costing, financials, etc.

IDI can support an outsourced payroll's integration with an ERP and create efficiencies around job costing.
